Skills

- JavaScript | Python3 | TypeScript | OOP | React | React Native | ExpressJS | AWS | GCP | Azure | CI/CD | GitHub
- DynamoDB | PostgreSQL | MongoDB | API Gateway | GitHub Actions | Docker | DSA

Experience

SDE II **Kognitiv Edge** **04/2025 - Current**
Minneapolis, MN, USA

- Key contributor** – Part of a 3-person engineering team that architected and delivered a mission-critical software for the **US Army specialized commands**.
- Offline-First Browser Engineering** – Developed an offline-first storage engine using Web Workers, DexieDB, and Origin Private File System (OPFS). Offering data persistence and synchronization for remote / offline environments requiring minimal network connectivity.
- Internal Tooling & Monorepo Management** – Authored the majority of the enterprise internal UI library, standardizing layouts and web components to accelerate fast-paced development across multiple product lines.
- Business Intelligence and Analytics** – Developed a real-time Power BI data exploration layer, highlighting metrics on thousands of cohorts, candidates, and instructors running throughout the year.
- Migration & Reporting** - Developed candidate report automation software for a legacy data ecosystem and successfully migrated the logic to a modern PostgreSQL data model, **resulting in a 50% speedup**. Built automated pipelines to process these independent data sources for candidate performance tracking against cohort-wide KPIs.
- Core Product Engineering**: Owned and solely developed a candidate intelligence dashboard (search, analytics, and exam overview) that was selected for demonstration to **senior government stakeholders**, contributing to product evaluation and direction.
- Devops and Data Orchestration** – Engineered a fault-tolerant **TypeScript CLI tool** to automate complex data seeding supporting **40+ relational tables** in production for **IL-5** and **IL-2** government cloud environments.

Software Engineer **Tata Consultancy Services (Eli Lilly & Company)** **01/2022 - 04/2025**
Remote (Contracting)

- Added multi-language support and LTR layouts for Lilly's internal **customer search portal**.
- Led development to redesign error handling logic for profile and data ingestion processes, significantly reducing ticket volume.
- Co-led backend development of ETL pipeline integration that processes email analytics and distributes patient profile data to third-party companies using (S3, Lambda, and Glue).
- Utilized Athena and AWS Glue to generate comprehensive weekly business reports tracking user opt-outs from communications via **Lilly's Preference Center**.
- Led E2E testing and wrote manual test scripts spanning coverage for all components in various integrations.
- Deployed scalable SNS and SQS infrastructure that decoupled patient attribute data from a variety of Lilly-sponsored programs.

Education

Bachelor of Science **Illinois State University** *Normal, IL, USA* **08/2017 - 08/2021**

- Major in Computer Science
- Dean's list Spring 2020, Fall 2021
